NOTE ON THE USE OF THE SUBJECT INDEX TO PLANT BREEDING ABSTRACTS

Summaries in "Plant Breeding Abstracts" are all given classification numbers based on the Universal Decimal Classification of the Institut International de Bibliographie. According to this system the whole field of knowledge is divided into ten primary classes, of which we are mainly concerned with only two, .5, representing Pure Science and .6, Applied Science. These numbers are decimals and may be subdivided by adding decimal places; for convenience in use, however, the decimal point is omitted; further points are inserted usually between every three figures, again merely for convenience of reference. The following example shows this method of subdivision:

6	Applied Science
61	Medicine
63	Agriculture
632	Plant diseases and pests
633	Special Crops
633.1	Cereals
633.11	Wheat

In spite of the great amount of detail in the Classification, it usually happens that a single number is not sufficient to locate an idea. The usual device is then to subdivide further by adding a colon and a second number, representing a second concept, thus:

633.11	Wheat
575.243	Induced mutation
633.11:575.243	Induced mutation in wheat

This process may be repeated to almost any length, e.g.:

581.45	Leaves
537.531	X-rays
633.11:581.45:575.243:537.531	Mutation of a leaf character in wheat induced by X-rays

The device has the additional advantage that the numbers can be reversed in filing and the reference made to appear under each of the relevant subjects, e.g. the above example would be treated as follows:

633.11:581.45:575.243:537.531	File under wheat
581.45:633.11:575.243:537.531	File under leaves
575.243:633.11:581.45:537.531	File under induced mutation
537.531:633.11:581.45:575.243	File under X-rays

In such cases certain other reversals are possible, such as:

633.11:575.243:581.45:537.531
633.11:537.531:581.45:575.243

The Subject Index included in this volume is in essentials a summary of the card catalogue kept at the Bureau and compiled according to the above system. It enables the user to find readily all the references on any particular topic in Volume IX of "Plant Breeding Abstracts" or, when used in conjunction with the Subject Indexes to Volumes I–V and Volumes VI–VIII, in the whole of "Plant Breeding Abstracts".

The method of use is simply to refer to the Key to the Subject Index on pp. 13–21 and there find the numbers for the subject sought, and then to refer to the appropriate combination in the Subject Index itself. It should be borne in mind, however, that reference to a particular topic may be made in more general papers bearing a number with less decimal places, e.g. although most references to rust in wheat will be found under the combination 633.11:632.452, some will be included in such combinations as the following:

633.1:632.452 (Rust in cereals)
633.11:632.4 (Fungous diseases in wheat)

Certain special usages remain to be commented on. A stroke between two numbers, e.g. 633/635, means that the sections from 633 to 635 inclusive, together with their subdivisions, are referred to. The numbers in brackets used in "Plant Breeding Abstracts", e.g. (54), are geographical subdivisions. 633.1(54), for instance, means Cereals in India. These geographical numbers have only been used sparingly in the Index and no attempt has been made to group together in any place all the research work according to the country where it was done.

THE IMPERIAL BUREAU OF PLANT BREEDING AND GENETICS,

School of Agriculture, Cambridge, England.

Director: PROF. F. L. ENGLEDOW, M.A., Drapers' Professor of Agriculture.

Deputy Director : P. S. HUDSON, Ph.D.

Assistants :

MRS. R. M. INGHAM, M.Sc. MISS M. L. C. WILSON, B.A. S. ELLERTON, Ph.D.

Secretary : MISS K. M. STEARN.

Publications :

PLANT BREEDING ABSTRACTS.

Issued quarterly. Subscription 25/-, with Subject Index 27/6. (Subscriptions sent direct from within the British Commonwealth of Nations are subject to a reduction of 5/-.) Single copies 7/6 each.

A few back numbers of Vol. V onwards are obtainable at 35/- per volume, single numbers 10/-. each.

Important Note.—Every effort is made to make Plant Breeding Abstracts as complete as possible and its notices of papers referring to plant breeding or the genetics of crop plants as prompt as possible. To aid in this, authors are invited to send to the Deputy Director copies of their papers immediately on publication.

Other Publications :

SUPPLEMENTS TO PLANT BREEDING ABSTRACTS		
Summary of Reports received from Countries exclusive of the British Empire, 1928-31. Supplement I.	2	6
Summary of Reports received from Stations in the British Empire, 1932-35. Supplement II	2	6
TECHNICAL COMMUNICATIONS		
Vernalization and Phasic Development of Plants	10	0
An Outline of Cytological Technique for Plant Breeders	1	6
The South American Potatoes and their Breeding Value	3	6
The Action and Use of Colchicine in the Production of Polyploid Plants, by J. L. Fyfe	1	0
Field Trials : their Lay-out and Statistical Analysis by John Wishart	2	6

BIBLIOGRAPHICAL MONOGRAPHS	s.	d.
Breeding Varieties Resistant to Disease	2	0
Breeding Resistant Varieties, 1930-33 (Supplement)	2	0
Oat Breeding Bibliography	1	6
Rice Breeding Bibliography	1	6
Bibliography on Interspecific and Intergeneric Hybridization in Relation to Plant Breeding	2	0
Account of Research in Progress in the British Empire	3	6
Rye Breeding Bibliography	1	6
Bibliography on Breeding Sorghums and Millets	1	0
The Experimental Production of Haploids and Polyploids	2	6
Tobacco Breeding Bibliography	1	0
Bibliography of Baking Quality Tests, Supplement	1	6
Bibliography on Cold Resistance	1	6

Subscriptions to any of the above Publications should be sent to the Deputy Director, Imperial Bureau of Plant Breeding and Genetics, School of Agriculture, Cambridge, England.

Lost in Transit.—Claims for numbers of Plant Breeding Abstracts lost in transit will only be considered if notice of such loss is received within three months of the date of posting.

2/13

IMPERIAL AGRICULTURAL BUREAUX

IMPERIAL BUREAU OF PLANT BREEDING AND GENETICS,

School of Agriculture,

Cambridge, England,

covers current literature on the breeding, genetics, and cytology of economic plants, including forage crops, fruits, and forest trees, and relevant publications in allied fields, such as applied statistics, plant pathology and other sciences.

For publications see inside cover.

IMPERIAL BUREAU OF PASTURES AND FORAGE CROPS,

Aberystwyth, Great Britain,

covers current literature on grassland and forage crop research, the botanical aspect of soil conservation and certain plant biological research.

Publications: Herbage Abstracts, 25/- per annum,* 7/- per quarter.

Herbage Reviews, 15/- per annum, 4/- per quarter.

IMPERIAL BUREAU OF HORTICULTURE AND PLANTATION CROPS,

East Malling, Kent, England,

covers current literature on horticulture, including fruit, vegetables, commercial flower production, the cultivation of tropical plantation crops and the storage and processing of horticultural products.

Publication : Horticultural Abstracts, 25/- per volume,* single copies 6/6.

IMPERIAL FORESTRY BUREAU,

39, Museum Road,

Oxford, England,

covers current literature on all branches of forestry and issues a quarterly publication.

Publication : Forestry Abstracts, 25/- per annum,* single copies 7/6.

IMPERIAL BUREAU OF SOIL SCIENCE,

Rothamsted Experimental Station,

Harpenden, Herts.,

covers current literature on soil science, and issues an abstracting journal six times yearly.

Publication : Soils and Fertilizers, 25/- per annum.*

* These prices are subject to a reduction of 5/- per volume to subscribers within the British Commonwealth sending their subscriptions direct to the Bureau. Details on application to its Deputy Director, to whom subscriptions to its Abstracts Journal should be sent. Certain Bureaux publish special editions of their abstracts journals printed on one side of the paper only, for use in card indexes.
